GEOTRAC 104/114/124
Series 4 – Tractors of a new Dimension

COCKPIT

The cockpit in the GEOTRAC 124 is spacious and ensures the optimal view of the vehicle. It can be individually adapted to any driver. A practical document compartment behind the backrest ensures easily accessible stowage space.

The comfort cab is equipped with state-of-the-art comfort steering wheel and the electronic system comes without sensor-based safety systems.

The Panorama comfort cab of the GEOTRAC 124 allows an unobstructed view through the rear side windows and the 3-speed vision window, push-out side windows and the 3-speed vision window. The wide opening of the rear window, push-out side windows and the 3-speed vision window ensures maximum comfort.

Lindner I.B.C. monitor

The Lindner I.B.C. monitor (intelligent on-board computer), which is normally employed only with heavy-duty vehicles, offers an electronic system with sensor-based safety systems.

A particularly innovative safety concept was implemented with the GEOTRAC 124. This high safety standard, against falling objects, for example during forestry work, protects the driver against rolling-over on slopes and falls.

The comfort cab is equipped with state-of-the-art comfort steering wheel and the electronic system comes without sensor-based safety systems.

A particularly innovative safety concept was implemented with the GEOTRAC 124. This high safety standard, against falling objects, for example during forestry work, prevents objects entering from the front.

The GEOTRAC 116 is a response with a high performance and efficiency in use, with 2.0 HP of output parameter and weight heavier, as is not on the market with technical potential. The GEOTRAC 116 is a high-speed variant of the GEOTRAC 105, with a prominent position in the current market.
