PREMIUM QUALITY FRUIT

## NURSERY / BAUMSCHULE / VIVAI

Our nursery is located in the very heart of Baranja region in Eastern Croatia. Well known quality of its rich soil and climate conditions influenced by the rivers Danube and Drava, combined with the technology used, give us the possibility to produce high quality trees.

Following all the necessary European standards, by using only virgin soils and **pure origin** of the basic material, we enable our growers a full potential and productivity of their new investment.

Trees are produced from well selected **virus free** rootstocks grown in Holland, while grafting material originates from the **certified** mothergardens like Vermeerderingstuinen Nederland, Nursery Braun or from the variety owners themselves.

Wide range of apple varieties produced, give each apple grower a chance to select most suitable variety for his production while within, new selections like Fubrax, Red Cap, Royal Beaut, Maririred, Jonaprince etc., ensure production stability but also much better

coloration and all important organoleptic values.

Depending on growers' needs, type of the soil, climate conditions and orchard „advantages or limitations”, our team carefully selects the suitable rootstock (M9-T337, FL56, M26, Pi80), appropriate variety and selection, but also type of the trees planted:

- 9 months old tree
- 1 year old tree
- 2 years old knip tree
- Premium quality knip

Our team of technologists ensures that the grower also receives all technical support and advice, especially regarding planting, pruning and all necessary know-how needed for the proper start of growing.

Extensive experience of our team, gained through our own fruit production on more than 100 hectares, gives all future growers unique first hand insight and experience on behaviour of each selected variety and type of the tree, throughout the year.
